Background Information

INPP5E (72 kDa inositol polyphosphate 5-phosphatase) converts phosphatidylinositol 3,4,5-trisphosphate (PtdIns 3,4,5-P₃) to PtdIns-P₂. In mouse, highest protein expression was in brain, heart, and testis, with lower expression in thymus and lung, and very little expression in kidney, spleen, and liver (PMID:10764818). Defects in INPP5E are the cause of Joubert syndrome type 1 (JBT51) and mental retardation-truncal obesity-retinal dystrophy-micropenis (MORMS) (PMID:19668215). It has 2 isoforms with the molecular mass of 66 kDa and 70 kDa.

Selected Validation Data

SH-SY5Y cells were subjected to SDS PAGE followed by western blot with 17797-1-AP (INPP5E antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded human testis using 17797-1-AP (INPP5E antibody) at dilution of 1:50 (under 10x lens).

Immunohistochemical analysis of paraffin-embedded human testis using 17797-1-AP (INPP5E antibody) at dilution of 1:50 (under 40x lens).

IF result of ciliary INPP5E in human hTERT-RPE1 cell: Upper is from control siRNA transfected cells and bottom is from INPP5E siRNA transfected cells. 17797-1-AP specifically recognizes the ciliary INPP5E (From Dr.Seongjin Seo).
